Research Overview

I am a third-year PhD candidate in Medical Engineering and Medical Physics at the Harvard-MIT Program in Health Sciences and Technology, advised by Dr. Polina Golland. The goal of my research is to address unmet clinical needs through the development of biomedical machine learning methods that deepen our ability to understand and treat disease. My current focus is on developing scalable synthetic data generation strategies to solve challenging problems in diagnostic and interventional radiology.

Research Areas: *computer vision, 2D/3D reconstruction, image-guided surgery, image-based diagnostics.*

Education

Massachusetts Institute of Technology
Ph.D. in Medical Engineering and Medical Physics

2021 - Present
Advisor: Polina Golland

Johns Hopkins University
M.S.E. in Biomedical Engineering

2020 - 2021
Advisors: Joshua Vogelstein and Carey Priebe

Johns Hopkins University
B.S. in Biomedical Engineering

2017 - 2021

Research Experience

Computer Science and Artificial Intelligence Laboratory, MIT *2021 - Present*
PhD student in the [Medical Vision Group](#). Developed DiffDRR, a differentiable X-ray renderer, and maintain an [open-source PyTorch implementation](#) with 100+ stars [C5]. Used DiffDRR to develop patient-specific 2D/3D registration algorithms with sub-millimeter accuracy [C6, C8]. Currently using synthetic X-ray generation to train 3D image guidance systems for minimally invasive surgery and diagnostic algorithms for difficult-to-detect diseases.

Xellar Biosystems, Newton, MA *Summer 2023*
Discovered mechanisms by which supervised deep learning models in drug discovery cheat by exploiting confounding factors, and developed an interpretability metric to quantify the level of confounding [C7].

Department of Biomedical Engineering, Johns Hopkins University *2018-2021*
Undergraduate researcher in the [Neurodata Lab](#). Developed novel machine learning algorithms to analyze populations of graph-valued objects [C4, P1]. Applied these methods to discover neuroconnectively similar subtypes of autism spectrum disorder from multigraph connectomics data [C3].

Ragon Institute of MGH, MIT and Harvard, Cambridge, MA *Summer 2018*
Developed predictive models of disease progression and immune recovery in HIV-positive children with TB co-infection using survival analysis [C2], and identified biomarkers for antiretroviral toxicity by applying machine learning methods to data from patients with HIV [C1].

Tufts University BioSeq Program, Somerville, MA *2016-2017*
Proposed and conducted independent high school research using next-generation sequencing (NGS) to generate a novel human oral microbiome dataset. Analyzed NGS data to identify microbial markers of oral health. Presented at the 2017 Intel International Science and Engineering Fair.

Awards

Best Poster Award, MIT-MGB AI Cures Conference	2024
President’s Innovation Award, Society of Biomolecular Imaging and Informatics	2023
Takeda Fellowship, MIT	2023
Neuroimaging Training Program Grant, MIT	2022
Provost’s Undergraduate Research Award, Johns Hopkins University	2020
Joseph C. Pistrutto Research Fellowship, Johns Hopkins University	2019
Second Place Winner, Microbiology, Intel International Science and Engineering Fair	2017
Semi-Finalist, Regeneron Science Talent Search	2017
Second Place Winner, Massachusetts State Science & Engineering Fair	2017
Second Place Winner, Massachusetts State Science & Engineering Fair	2016

Invited Talks

Differentiable X-ray Rendering for Fast Intraoperative 2D/3D Image Registration

- *GE HealthCare AI*, Bangalore, India 2024
- *MIT Visual Computing Seminar*, Cambridge, MA 2024

Learning Interpretable Single-Cell Morphological Profiles from 3D Cell Painting Images

- *Society of Biomolecular Imaging and Informatics*, Boston, MA 2023

Fast Auto-Differentiable DRRs: Quickly Solving Intraoperative Imaging Problems

- *Boston Medical Imaging Workshop*, Brigham and Women's Hospital, Boston, MA 2022
- *Image-Guided Neurosurgery Meeting*, Boston, MA 2022
- *Medical Image Computing and Computer Assisted Interventions CLIP*, Singapore 2022

Multiscale Comparative Connectomics

- *Presentations by Undergraduates in Life Sciences and Engineering* 2021
Faculty-selected speakers from Johns Hopkins, Morgan State, and Coppin State University
- *PathAI*, Online 2021
- *Neuromatch Conference*, Online 2020

Teaching

EN.BME.438/638 NeuroData Design II (Undergraduate/Graduate) Spring 2021

Head Teaching Assistant, Johns Hopkins University

EN.BME.437/637 NeuroData Design I (Undergraduate/Graduate) Fall 2020

Head Teaching Assistant, Johns Hopkins University

EN.BME.487 Computational Cardiology Laboratory (Undergraduate) Fall 2020

Teaching Assistant, Johns Hopkins University

AS.MATH.201 Linear Algebra (Undergraduate) Fall 2020

Teaching Assistant, Johns Hopkins University

Mentorship

Academic

- Mohammadhossein Momeni, Truman State University Summer 2024
Co-supervised with Professor Sarah Frisken, Harvard Medical School

Community

- Graduate Residence Advisor, McCormick Hall, MIT 2024 - Present

Service

Reviewer, IEEE Transactions on Medical Imaging 2024

Reviewer, Medical Imaging Computing and Computer Assisted Interventions (MICCAI) 2024

Reviewer, Medical Imaging with Deep Learning (MIDL) 2024

Software

DiffDRR: GPU-accelerated & auto-differentiable digitally reconstructed radiographs in PyTorch 2022
